EXECUTIVE SUMMARY

Systems Engineer and Full Stack Developer with more than 3 years of formal experience in the JavaScript/TypeScript ecosystem. Specialized in the design and architecture of scalable applications, combining an ultra-high performance Frontend (React.js, Next.js, Angular, Vite) with a robust and decoupled Backend (.NET 8, Node.js, Python). Proven experience in remote international environments, implementation of Hexagonal Architecture and Domain-Driven Design (DDD), CI/CD automation and deployment of solutions with Artificial Intelligence.

PROFESSIONAL EXPERIENCE

Enovate — International Hiring (Remote)

Software Engineer - Frontend Developer

May 2023 – May 2026

- I led the frontend engineering from scratch for Drill BI Optimization (B2B oil well monitoring platform), progressing rapidly from an intern role to the official engineering position.
- I designed the ingestion and visualization of data in real time using high-frequency dynamic APIs, optimizing the life cycle of the components to render complex graphics without memory leaks.
- Implemented modern workflows using Vite and pnpm, significantly reducing build and deployment times in integration environments.

Annar Health Technologies — Bogota, Colombia

Junior Developer

August 2022 – April 2023

- I developed and maintained the web ecosystem of the IT Health Projects area building interfaces with Angular and Angular Material (TypeScript).
- Translated complex business requirements into functional and intuitive interfaces, collaborating with stakeholders to improve product adoption.
- I proposed and integrated new code analysis tools to modernize and optimize the Frontend team's stack.

EAN University (Applied Academic Project) — Bogotá, Colombia

Software Designer & Frontend Developer

February 2026 – May 2026

- Led the design of the complete life cycle (SDLC) of a corporate modular system for human resource management.
- I drafted the Software Requirements Specification (SRS), modeled relational databases, and executed the UI/UX design in Figma until its final implementation.

FEATURED PROJECTS

Process Status Automation Engine (Full Stack)

- I designed the backend of an asynchronous notification system strictly applying Hexagonal Architecture and DDD using .NET 8 (C#) and persistence in MongoDB Atlas.
- Ensured the stability of the software by achieving coverage in unit tests using xUnit and Moq, with automated deployments via GitHub Actions (CI/CD). Frontend developed in Angular and Tailwind CSS.

OurChatbot (Artificial Intelligence Integration)

- I developed an intelligent conversational agent. Efficiently managed asynchronous requests and connected data persistence (SQLite3), applying advanced context control techniques for Language Models (LLMs).

EDUCATION

EAN University — Bogotá, Colombia

Systems Engineering (Degree Candidate)

2022 – 2026

Servicio Nacional de Aprendizaje (SENA) — Bogotá, Colombia

Information Systems Analysis and Development Technologist (ADSI)

2021 – 2022

Software Programming Technician

2019 – 2020

Honors: Recognition of Academic Excellence and Best Software Project for the development of a Full Stack MVP.

TECHNICAL SKILLS AND CERTIFICATIONS

Frontend & UI/UX: React.js, Next.js, Angular, TypeScript, ES6+, Vite, pnpm, Tailwind CSS, Angular Material, Figma.

Backend & Databases: Node.js, Python, C# (.NET 8), PHP, PostgreSQL, SQL Server, MongoDB Atlas, SQLite3.

Architecture & DevOps: Hexagonal Architecture, DDD, RESTful APIs, Git/GitHub Actions (CI/CD), xUnit, Moq, Postman.

Languages: Spanish (Native), English (A2/B1 Technical).

Outstanding Certifications:

- Oracle Cloud Infrastructure (OCI) Foundations Associate — *Oracle University (2026)*
- Modern React with TypeScript — *Udemy (2026)*
- SQL Basic & CSS Skill Certified — *HackerRank (2023)*
- Angular & TypeScript Path — *Platzgi (2022 - 2023)*
- Python Development — *Platzgi (2022)*
